Supplementary instructions

• The luminaire manufacturer is responsible for measuring and verifying the EMI compliance of the complete luminaire, as the level of radio interference will vary depending on the luminaire construction. Especially primary and secondary cable lengths and their routing may have a significant effect on radio interference.

Wiring diagram

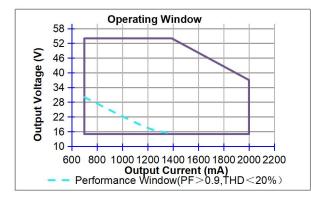

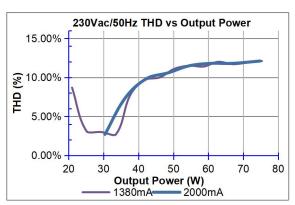

- All connections must be as short as possible to ensure good EMI performance.
- The luminaire wire should keep a certain distance from the LED power supply and other wires (5...10 cm is preferred).
- No secondary switches are allowed.
- Incorrect wiring can damage the LED.
- The wire must be well protected against short circuit.

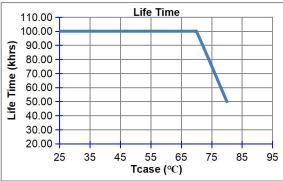

Technical information

It's important to set output current (AOC value) according to LEDs voltage, make sure the power is within 75W +5%

Example of AOC settings

V_LED (Vdc)	AOC_max	P_out (W)
54	1390 mA	75
50	1500 mA	75
40	1875 mA	75
37	2000 mA	75
