Supplementary instructions

- The luminaire manufacturer is responsible for measuring and verifying the EMI compliance of the complete luminaire, as the level of radio interference will vary depending on the luminaire construction. Especially primary and secondary cable lengths and their routing may have a significant effect on radio interference.
- For the push DIM function, please follow our instructions, which can be downloaded from www.cupower.com.
- The recommended NFC communication distance: 5...20 mm.

Wiring diagram

- All connections must be as short as possible to ensure good EMI performance.
- The luminaire wire should keep a certain distance from the LED power supply and other wires (5...10 cm is preferred).
- No secondary switches are allowed.
- Incorrect wiring can damage the LED.
- The wire must be well protected against short circuits.

Technical information

It's important to set the output current (AOC value) according to the LED voltage and make sure the power is within 100 W + 5%.

Example of AOC settings

V LED (Vdc)	AOC max	Pout (W)
220	454 mA	100
200	500 mA	100
180	555 mA	100
142.9	700 mA	100
