Wiring diagram

- All connections must be as short as possible to ensure good EMI performance.
- The luminaire wire should keep a certain distance from the LED power supply and other wires (5...10 cm is preferred).
- Incorrect wiring can damage the LED.
- The wire must be well protected against short circuit.
- The product must be well grounded.
- When both the EDIP port and the adjustable power switch are present, it is recommended to set the power DIP switch to the maximum current position. At this time, the maximum current value of the EDIP port is the current value at which the power DIP switch is set.
- When both the CCT port and the adjustable color temperature switch are present, if you need to use the CCT port, the adjustable color temperature switch must be set to the leftmost position.

Technical information

at Tc 85°C (0.2% / 1,000 h failure rate)

It's important to set the output current (AOC value) according to the LED voltage and make sure the power is within Pout + 5%.

Example of AOC settings

V LED (Vdc)	AOC max	Pout (W)
52	1450 mA	75.4
52	1700 mA	88.4
49	1950 mA	95.5
43	2200 mA	94.6
40	2400 mA	96
